DENON AVR control protocol

Application model : AVR-4520CI/AVR-4520
Application terminal: Ethernet
                              RS-232C

Rev 8.1.0

Connector specification

Ⅰ. **RS-232C**

Connector type: DB-9pin female type, slave straight connection (DCE type)
              (1pin : GND , 2pin : TxD , 3pin : RxD , 5pin : Common(GND) , 4,6,7,8,9pin : NC)
Communication format:

Synchronous system	: Tone step synchronization
Communication system	: A half duplex
Communication speed	: 9600bps
Character length	: 8 bits
Parity control	: None
Start bit	: 1 bit
Stop bit	: 1 bit
Communication procedure	: Non procedural
Communication data length	: 135 bytes (maximum)

NETWORK SETUP of AVR-4520CI/AVR-4520

>Procedure of Network Setup mode.

(1) Press SETUP MENU button, then Menu appears on FL-display(and GUI)

(2) Select "Setup Menu > Network > Settings " .

(3) Set parameters described below.

  <DHCP>   "On"---Use this setting when DHCP server is on the local network.

                 "Off"---Use this setting when DHCP server is not on the local network.

  <IP Address> When <DHCP> sets "Off", please set IP address.

                 When <DHCP> sets "On", you can confirm the IP address that is set by server.

  <Subnet Mask> When <DHCP> sets "Off", please set Subnet Mask.

                 When <DHCP> sets "On", you can confirm the Subnet Mask that is set by server.

  <Gateway>   Set the address of Gateway when Gateway is on the local network.

                 Do not set this parameter when Gateway is not on the local network.

  <Primary DNS> Do not set this parameter.

  <Second DNS> Do not set this parameter.

  <Proxy>   Set this parameter "Off".

  <Network Option: IP Control>

  (1) Press SETUP MENU button, then Menu appears on FL-display (and GUI)

  (2) Select "Setup Menu > Network > Network"

  (3) Set parameters described below.

        "Always On"---Use this setting when using the AVR-4520CI/AVR-4520 Connected in a network.

        "Off In Standby"--- Use this setting when not using the AVR-4520CI/AVR-4520 connected in a network.

                       This setting is reducing the power consumption in the standby mode.

Protocol specification

The following three data forms are defined.

      COMMAND : The message sent to a system(AVR) from a controller(Touch Panel etc.)
                     A command to a system is given from a controller.

      EVENT : The message sent to a controller (Touch Panel etc.) from a system (AVR)
                     The result is sent, when a system is operated directly and a state changes.
                     *The form of **EVENT** presupposes that it is the same as that of **COMMAND**.
                     Refer to the following table for the contents of **COMMAND and **EVENT**.

      RESPONSE : The message sent to a controller (Touch Panel etc.) from a system (AVR)
                     if the 'request command' (**COMMAND**+**?**+CR(0x0D)) has came from a controller.
                     The **RESPONSE** should be sent <u>within 200ms</u> of receiving the **COMMAND**.
                     *The form of **RESPONSE** presupposes that it is the same as that of **EVENT**.

Basic specification: The command by ASCII CODE, parameter expression

      *ASCII CODE which can be used is from 0x20 to 0x7F: the alphabet and the number of 0-9, and space (0x20), some signs,
                                     AND carriage return (0x0D) --- It is used only as a pause sign.

Command structure: COMMAND + PARAMETER + CR (0x0D)

      COMMAND: ASCII CODE of 2 characters

                Ex.   SI : Select Input source
                         MS : surround Mode Setting
                         MV : Master Volume setting
                         PW : system PoWer setting

      PARAMETER : ASCII CODE (up to 25 characters)

                ex.   DVD : function name

                      SUPER STADIUM : surround mode name
                *Special Parameter--- ? : for request command

The example of a command   * <CR> is the meaning of 0x0D.

      SIDVD<CR> : Select Input source DVD

      MSSTEREO<CR> : surround Mode Set to STEREO

      MVUP<CR> : Master Volume UP

      PWON<CR> : system PoWer ON

      PWSTANDBY<CR> : system PoWer STANDBY

      SI?<CR> : Request command for now playing input source >> Return *RESPONSE* 'SI***<CR>'

Others

A) **COMMAND** is receivable also during transmission of **EVENT**.

B) Since CHANNEL VOLUME changes simultaneously when the SURROUND MODE changes, the value of the channel volume of all channels returns as **EVENT**.

C) CHANNEL VOLUME returns the data of ALL channels by the present SURROUND MODE also including an intact channel. In this case, the data of an intact channel is set to "50".

D) Since SURROUND MODE changes simultaneously when the INPUT source changes, the SURROUND MODE (and also the value of the channel volume of all channels , It described in B)) returns as **EVENT**.

E) When SURROUND MODE is the same in between INPUT source change before and after, **EVENT** of SURROUND MODE and CHANNEL VOLUME does NOT return.

F) Although **EVENT** of SURROUND MODE returns when the present SURROUND MODE is set up again, CHANNEL VOLUME does NOT return.

G) When SURROUND MODE is changed, before returning SURROUND MODE after change as **EVENT**, the present SURROUND MODE is returned.

H) The **RESPONSE** should be sent as opposed to the request command by all the commands with which an **EVENT** exists , not need to the another request commands(ex. SV command).

I) The **PARAMETER** (with **COMMAND** and **RESPONSE**, **EVENT**) of minimum level of MASTER VOLUME defines "00".

J) If the MASTER VOLUME & CHANNEL VOLUME set with 0.5dB step, the **PARAMETER** (with **COMMAND** and **RESPONSE**, **EVENT**) defines three ASCII characters as bellows.

```
   Ex.   MASTER VOLUME =   +18.0dB :     MV98<CR>
                               |            |
                           +1.0dB :     MV81<CR>
                           +0.5dB :     MV805<CR>
                              0dB :     MV80<CR>
                           -0.5dB :     MV795<CR>
                           -1.0dB :     MV79<CR>
                               |            |
                          -79.5dB :     MV005<CR>
                            --- :       MV00<CR>
```

   * At the **.0dB step, only uses two ASCII characters as **PARAMETER**, same as usual.

K) **1 seconds** later, please transmit the next **COMMAND** after transmitting a power on **COMMAND** (PWON) .

Extension COMMAND

・**The RC code can be sent from Serial protocol commands**

Protocol specification

Command structure: COMMAND + RC FORMAT + RC DATA + CR (0x0D)

      COMMAND : ASCII CODE of 2 characters

             Ex.   RC : RC CODE

      RC FORMAT : ASCII CODE of 3 characters

             Ex.   **KSK** : KASEIKYO FORMAT

                       SHP : SHARP FORMAT

      RC DATA : ASCII CODE of 7 characters

        ※For details of the RC CODE , please refer to the IR remote control code list.

KASEIKYO FORMAT

REMOTE ID SET : 1
